MARKET REVIEW

U.S. equities suffered through a very poor fourth quarter, despite a good underlying economy and continued strong profitability. The relatively high valuation with which we entered Q4 combined with the Fed's measured rate normalization and slow runoff of the Treasury's massively expanded balance sheet are key drivers of the increased volatility of late.

Size/Style

Within the R2500, the higher overall valuation led to a more severe selloff to close the year:

- From a style perspective, growth topped value in both mid-caps and small-caps - with a slightly larger advantage within the small-cap segment.
- Small-caps entered a bear market, while mid-caps narrowly averted bear territory.

Russell 2500 Sectors

We again saw a lack of quarter-to-quarter correlation of relative sector performance:

- Higher-yielding, counter-cyclical issues paced the market during the pullback. The Utilities and Consumer Staples sectors were the top two performers, and the Utilities sector was the best performing Russell 2500 sector for the calendar year.
- Energy stocks repeated their poor relative showing from the prior quarter, and their 40% decline resulted in the largest decline of any sector for the year. The Health Care sector declined 23%, erasing nearly all gains from the first nine months.

FOURTH QUARTER ATTRIBUTION

The SMidCap strategy declined about 17.9% during the quarter, topping the benchmark Russell 2500 Index's -18.5% return. The table below breaks down the contributions from sector positioning and stock selection.

In total, sector positioning detracted 1.23% from active return:

- Overweighting the Consumer Staples sector contributed 14bps to active return, as the sector outperformed the benchmark by nearly 9% during Q4.
- Underweighting the Utilities sector detracted 46bps, as the sector outperformed the Russell 2500 Index by about 6%.

More importantly, stock selection within the respective sectors added 1.82% to active return:

- Stock selection within the Consumer Discretionary sector was outstanding.
- However, stock selection was poor within the Financials sector.

MARKET OUTLOOK

Any change from what we called the "pretty Goldilocks" condition of Q3 2018 could only be in one direction – and it was. But conditions are still pretty darned good.

Last quarter, we noted corporate profits had eclipsed their previous record; they did so again in the latest reported quarter, with margins still sitting north of 10%.

We also noted price pressures remained in check; since that writing, oil prices have slid into a bear market, pulling headline CPI back closer to 2% per year.

Employment numbers are also very strong. In addition to very low headline unemployment, we have workers re-entering the labor force (as evidenced by the simultaneous increase in the U-6 unemployment rate). And with a near-term supply-demand imbalance, employment costs continue to rise – meaning more than just shareholders are beginning to share in the fruits of this long expansion. And that has people – consum-

ers and producers – feeling confident. But not as confident as they felt a month or two ago...

Washington, D.C. is right in the bullseye if we’re looking for the cause of the withering confidence, lack of visibility, and increased volatility.

The mid-term elections held few surprises, but investors collectively wonder what the Democratic resurgence will mean – both in terms of policy, and in terms of the Presidency. We seem to have withstood the known unknowns of the Trump Presidency, but fret over the political unknowns which lie ahead.

To this political uncertainty, we add the usual rate hiking cycle of the Federal Reserve Board late in an economic expansion. All cycles are unique, and the Fed typically does not execute perfectly in attempting to allow a moderate expansion with little price pressure. This cycle is unique in at least two ways: The Fed is raising rates from a very low level, and it’s embarked on the hikes with little sign of above-target inflation.

More impactful: The Fed is raising rates as the Treasury allows its massively-expanded balance sheet to runoff. This combination is as unprecedented as Trump and Pelosi’s televised tête-à-tête... Americans like good reality TV, but markets generally don’t like unprecedented combinations.

With all of this said, U.S. equities do appear attractive on a number of measures. Companies are generating high returns on assets/equity, are maintaining high margins, and now trade at a discount to historic valuation measures.

The SMidCap model is strongly biased against stocks with higher price volatility and earnings variability. The model now exhibits a preference for higher Earnings Yield, and Dividend Yield has also swung into favor. From a style perspective, the model prefers mid-cap over small-cap. Financials (Banks, Equity REITs) have swung into favor, while Health Care stocks (Biotech, Drugs) are now out-of-favor.
